Career Opportunities and Employability

Risk Management: This sector by far has the highest opportunity in terms of employment for people with expertise in derivatives. Many investment firms are thus, looking for people with proper knowledge in financial derivatives for the risk management arm.

Trading: Traders are the people who trade the actual instrument, whether over-the-counter or on an exchange floor. Traders often have an inventory of positions to make a liquid market for clients.

Analysts: Analysts are the people who make it happen. They study historical data, analyse current and past trends and markets and predict the “future” of the market. Their job also includes forecasting based on what external factors can or may affect the position of the commodity or the equity in the future.
